

# RumiLife<sup>®</sup> CAL24<sup>™</sup>

## Nutritional Supplement

A uniquely formulated bolus product to promote calcium levels in fresh cows.

### Key Benefits

- › Contains calcium chloride for immediate release.
- › Contains Calmin, a naturally found combination of seaweed-derived calcium and magnesium oxide, for a long-lasting sustained release.
- › Contains vitamin D to maximize absorption and utilization of calcium important for the first 24 hours after calving and other times associated with low calcium levels.
- › Provides 100g of calcium per dose (50g per bolus).
- › The only single dose product on the market proven to sustain calcium levels for 24 hours.
- › Boluses are tapered and coated in paraffin wax and coconut oil for easy administration in all breeds, including Jerseys.

### Bolus Ingredients

- › Seaweed-derived calcium carbonate
- › Calcium chloride
- › Magnesium oxide
- › Water
- › Vitamin D3 supplement
- › Paraffin wax
- › Coconut oil

### Feeding Directions

Give one package of two boluses immediately following calving. After use of a calcium injection, give one package of two boluses 2-3 hours after injection procedure to provide additional supplementation.

Package Options	Number of Doses
24-count box (48 boluses) (5156)	24
60-count box (120 boluses) (5157)	60
60-count box pallet (2,400 boluses) (5157FC)	1,200

# RumiLife® CAL24™ Nutritional Supplement SOP

## 1st Lactation Heifers

Administer one package of two boluses immediately after calving for heifers that had twins or a difficult calving.

## 2nd Lactation Cows

Administer one package of two boluses immediately after calving for cows that had twins, a difficult calving or relatively high milk yield in their previous lactation.

## 3rd+ Lactation Cows

Administer one package of two boluses to all 3+ lactation cows immediately after calving.
