

# GENEX Foundation™ 150

## natural bovine colostrum

Whole natural bovine colostrum to replace or supplement maternal colostrum as an aid in the treatment of Failure of Passive Transfer (FPT) in newborn calves.

### Key Benefits

- › Whole colostrum containing all of the bioactive factors a calf needs
- › Colostral fat stimulates brown fat metabolism and thermoregulation
- › Lactoferrin stimulates development of the calf's gastrointestinal tract
- › Contains 26.6% IgG and 14% fat
- › USDA Licensed Veterinary Biological
- › Comes in a Perfect Udder® bag that's quick, clean, convenient and offers great mixability

### Ingredients

- › Bovine Colostrum

### Feeding Directions

- › Remove cap and add warm water (110 - 120°F) to the fill line (7.5 cups).
- › Replace cap, shake and massage vigorously for two minutes or until solids are dissolved.
- › Remove the cap, attach an esophageal tube or nipple, and feed. Make sure the calf consumes the entire contents of the bag.

For best results, administer Foundation™ 150 colostrum within two hours of birth. Do not mix with other products

Package Options	Number of Bags
One box of 12 bags (12 tubes, 1 nipple included)	12 bags of 150g IgG each
